Multimedia Effect in Problem Oct. 18, 2019 Solving: A Meta-Analysis

Liru Hu, Gaowei Chen, Pengfei Li, Jing Huang

Which one is better?

A full water tank on a water dispenser contains 20 liter. Students from the dispenser fill their 25 cl water bottles.

How many water bottles can be filled from a full water tank?

bottles

Pictures, graphs, diagrams, animations and videos have been very common on usual exercises and standardized tests.

The multimedia effect in problem solving describes the phenomenon where an individual's problem-solving performance is enhanced when pictures are added to textual problems.

Literature Review

Informational

About how many apples are there in the bag? apples

An informational picture in Math (Hoogland, de Koning, Bakker, Pepin, & Gravemeijer, 2018)

Carl has 5 friends and George has 6 friends. Carl and George decide to give a party together. They invite all their friends. All friends are present. How many friends are at the party?

s in Math (Dewolf, Van Dooren, Hermens, & Verschaffel, 2015) Maria designed an experiment using salt and water. She experienced that 15g salt dissolved in 50ml water, 30g salt in 100ml water, 45g salt in 150ml water and 60g salt in 200ml water. The water's temperature was always 25°C. Maria stirred every mixture several times.

What was Maria studying in her experiment?

- A How much salt will dissolve in different volumes of water.
- B How much salt will dissolve at different temperatures.
- © If stirring increases how fast salt

A representational picture

[®] If stirring decreases how fast salt Representational

Information about prevalence of the diseases, and sensitivity and false-positive rate of the tests provided in the probability (first line) and natural frequency (second line) conditions. Note that the false-positive rate is the complement of the specificity.

Diagnostic task	Base rate	Sensitivity	False-positive rate	Positive predictive value
Breast cancer	1%	80%	10%	7%
	100 of 10,000	80 of 100	990 of 9900	80 of 1070

Imagine a representative sample of women who got a positive result on the mammography. Give your best guess: how many of these women do you expect to have breast cancer?

> An organizational pictures in Medical Science (Garcia-retamero & Hoffrage, 2013)

Overall Women who have breast cancer populatie Organisational

Response Accuracy Multimedia Effect on Response Accuracy
 Moderators: Picture function+Problem difficulty

- Function type of pictures
 Only Representational and Organisational pictures
- Problem difficulty
 Only for Difficult Problems

Response Accuracy Moderating effect of problem difficulty conforms to the element interactivity effect

 Interactivity effect occurs when multimedia effects present in high intrinsic cognitive load conditions disappear or even reverse in low intrinsic cognitive load conditions (Chen et al., 2015; Chen, Kalyuga, & Sweller, 2016).

Response Accuracy Moderating effect of picture function challenges *Less is more* in classic multimedia learning theories.

- Informational pictures have little impact.
- Representational, organisational and decorative pictures are not harmful.

Response Certainty

Motivation, Engagement, Pleasure, Self-efficacy

Less critical with text Decreased time spent processing text Suboptimal restudy behavior etc.₂₅

- Quality of studies is not strictly evaluated
- More moderators need to be identified and analysed

Which one is better?

A full water tank on a water dispenser contains 20 liter. Students from the dispenser fill their 25 cl water bottles.

How many water bottles can be filled from a full water tank?

bottles

- •There are still very few design principles guiding multimedia item designs.
- •Existing multimedia learning principles are not enough to guide multimedia item design.
- •Embedding multimedia can facilitate item access and accommodation, it may also lots of issues that have yet to be fully explored. Further prospective studies are in urgent need.

Main Code	Category
Outcome	Response accuracy/response time/response certainty.
Function type	Decorative/representational/organisational/informational/ multiple.
Experimental design	between group design/within group design, and other.
Control condition	Yes/No
Domain	Mathematics/Science/Language/Medicine.
Educational stage	Primary/university/other.
Problem size	The number of problems in one group.
Answer format	Multiple-choice/structured open response
Problem difficulty	Easy/difficult
Testing environment	Paper and pencil/computer-based
